sea-house, the sea - house, all our love to give.

The Sea House Song

words by Lucy Owen
music by Gwyn Morgans

It's Coral, our Coral,
We know that she's the one.
Oh Coral, yeah Coral,
Shines bright as the sun.
She may not have gills,
She may not have fins,
But she's one of us,
We know she'll help us win!

*In the Sea House, the Sea House,
It's where your best friends live,
In the Sea House, the Sea House,
All our love to give.*

It's Coral, our Coral,
The one we're waiting for.
Oh Coral, yeah Coral,
The one we adore.
She so loves to sing,
She so loves to swim,
And she's one of us,
We know she'll help us win!

*In the Sea House, the Sea House,
It's where your best friends live,
In the Sea House, the Sea House,
All our love to give.*

Calon lân yn llawn daioni
Tecach yw na'r lili dlos
Dim ond calon lân all ganu
Canu'r dydd a chanu'r nos.

*A pure heart full of goodness
Is fairer than the pretty lily,
None but a pure heart can sing,
Sing in the day and sing in the night.'*

Colour in Fabulous ♥

It's party time! Plan the perfect party for you and your friends!

Who would you invite?

What food and drink would you have?

What theme and decorations would you have?

What music would play?

What games and activities would there be?

Draw a fish friend in the tank and colour in your picture.

What would you call your fish friend?

Try writing a story about you and your new friend.

Fabulous's Fantastic Fish Facts

1. I am actually a REAL fish! It may be hard to believe, but there are fish as sparkly as me in the ocean! I am a **Damselfish**. When we are young, people often call us Jewelfish, because we dazzle like diamonds. As I get older, my glittering spots will start to get smaller and fade. But I'm always going to shine as brightly as I can!

2. Seahorses are very romantic. When they are dating, they like to dance together, swirling round and round. It's not the mum who gives birth to their

babies either. Seahorses are the only species on earth where dads nurture pregnancies and give birth! Wouldn't it be lovely if Dobbin and Swish have a family soon? They have been doing a lot of dancing after all.

3. Sea turtles have been around for a very, very long time. They are some of the oldest creatures on earth. Turtle fossils have been found that are 150 million years old. Dinosaurs became extinct 65 million years ago, so that just shows how old they are! Turtles spend most of their lives at sea, but female sea turtles come ashore to lay their eggs. They look a bit

like ping pong balls and turtles can lay as many as 200 at a time! But most of the hatchlings won't survive. It makes me sad to think that

nearly all types of sea turtles are under threat of extinction.

4. Puffer fish are not very good swimmers. I feel mean saying this about Bubba and his friends, but most puffer fish are quite slow and clumsy in the water. That's why they puff up! If they can't escape quickly enough from a fish who is trying to eat them, they gulp in large amounts of water and puff up to look big and spiky to scare them away. Those poisonous spines sticking out make puffers really difficult to chew and swallow too.

5. Octopuses DO change colour! Remember when Otto camouflaged himself in the curtains

during the battle in Coral's living room? In the ocean, as well as in Coral's living room, octopuses use this trick to hide from danger. They can change their size, colour, shape and size in a flash! They even shoot out black ink to make the water dark and cloudy so they can swim away from predators without being seen. I would love to be able to do those tricks, wouldn't you?

6. Fish can kiss! There are fish with lips like Dr Sweetlips. The sweetlips species plant kisses on other fish.

Nobody is quite sure why they pucker up, but it's not always friendly. It could be a warning to other fish not to venture into their territory. I'm so glad Dr Sweetlips has such strong lips, because they saved my life!

7. Stingrays aren't bad. Stealth is a very unusual stingray, because most of them in the ocean are actually kind and

gentle. It's only when they feel threatened that they will attack with their poisonous tail. Their flattened bodies help them hide in the sand and sometimes they get stepped on accidentally. Then they use their stinger in self-defence. We can't blame them for trying to protect themselves, can we?

8. Eels are very bendy. Remember how Marvin 'Hot Moves' Mackenzie twisted himself

into the shapes of letters to spell Coral's name? Well, Marvin could do this because eels have more than a hundred tiny segments in their backbone, called vertebrae. This makes eels very flexible, which is great for busting moves on the dance floor, like Marvin!

9. Stonefish are the most poisonous fish in the world. That's because

each has sacks of venom on every one of its 13 spines. But these fish don't often go out of their way to attack. The poison is to defend themselves. Even so, it's no wonder Coral and I were a bit scared of Rocky and Edge at times. Amazingly, stonefish can survive up to 24 hours out of water, when I'd only last a few minutes! Gulp!

What other sea creature facts can you discover?

Write them down here....

10. Sea urchins

don't have brains.

Yup, the urchin army weren't very clever were they? But sea

urchins can be smart, even without brains.

They have a nervous system that responds to what is happening around them instead.

And wait for this – the red sea urchin can live for more than 200 years, which makes them one of the longest living creatures on earth!

Fabulous's Fantastic Fish Crossword

All the answers to this crossword can be found on the
Fabulous's Fantastic Fish Facts pages

Down

1. What type of fish is Fabulous?
2. Which sea creature can change their colour, shape and size?
3. Which of Coral's fishy friends likes to kiss?
